

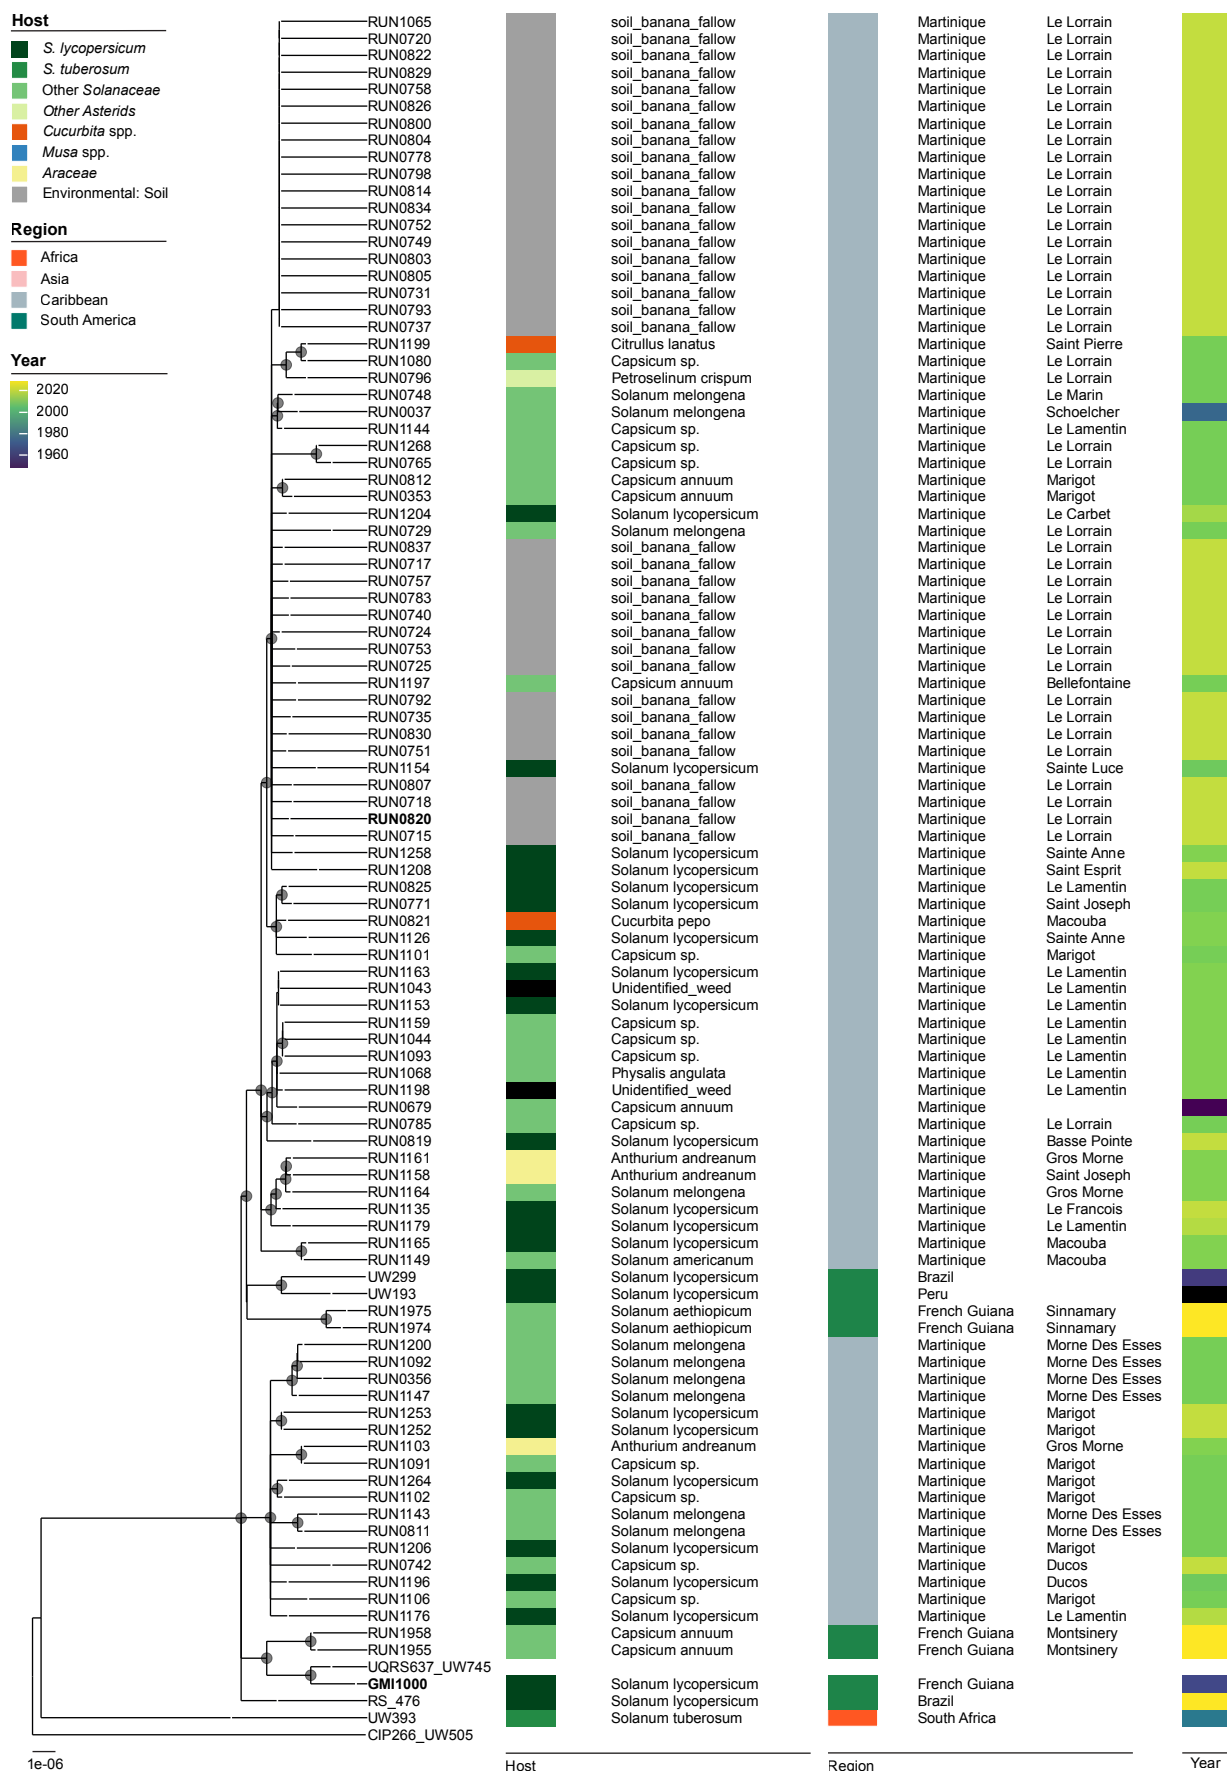

Fig. S4. Rps I-18 core genome tree with outgroup. Maximum likelihood core genome tree of all Rps I-18 with UW393 and CIP266_UW505 included as outgroup strains, using Rps1S18 GMI1000 as reference. Nodes with bootstrap support below 70 are collapsed. Host, geographical region and year of isolation are shown as in Fig. S1. Complete or near-complete genome assemblies generated in this study are shown in bold.
